

CONGRATULATIONS CITY OF ROSEVILLE

When the City of Roseville needed to replace the older boom truck in their fleet they turned to Coastline Equipment Crane Division and Sacramento Truck Center. They were interested in a boom that was rear mounted with an operator seat and maximum boom length...they decided on a new Manitex 22101S equipped with a 22 ton capacity and 101' 4 section telescopic main boom. With it's out and down outrigger pattern and continuous rotation they are able to achieve a 360 degree operating area. For the chassis they chose a new 2011 Freightliner tandem axle unit equipped with an Allison automatic transmission. The combination of crane capacity, dependability and ease of operation proved to be the best fit for the application.
