

CONGRATULATIONS **YOLO MACHINERY ERECTORS INC.**

When it was time for Yolo Machinery Erectors to upgrade their boom truck they knew exactly what they were looking for. They turned to the expertise of Coastline Equipment's Crane Division to help them put the dream into reality. Being a very successful machinery erecting company in the Central Valley they not only needed something very powerful and maneuverable in a truck chassis but also enough power boom to reach any job that may come along. The choice was a Manitex 40124SHL (Heavy Lift) It is equipped with a 5-section 124' main boom and also has a 31' jib. With a tremendous capacity of 880 lbs. @ 115' it can handle numerous jobs that the existing unit could not. Teamed with a 2011 Kenworth T800 chassis with 485HP Cummins engine. They couldn't be more pleased with the machine and the staff at Coastline Equipment Crane Division.
