

CONGRATULATIONS GSE CONSTRUCTION

When it was time for GSE Construction to purchase another rough terrain crane they consulted with Coastline Equipment Crane Division and the Tadano Product. The machine they chose for the job was the TR800XXL-4 80 ton capacity machine with a five-section 144' main boom and a 2 pc. 58' lattice jib for a total tip height of 210 feet! It was the perfect machine for the application and with the Tier 3 engine meets all of the latest emission standards. They could not be happier with the ease of operation and performance of the Tadano machine. \
